TWO-FACEBOOK

For there are certain men crept in unawares, who were before of old ordained to this condemnation, ungodly men, turning the grace of our God into lasciviousness, and denying the only Lord God, and our Lord Jesus Christ. [Jude 1:4 KJV](#)

GOVERNMENT INTRUSION GONE MAD “GREEN NEW DEAL” TAKES EVERYTHING YOU HAVE INCLUDING YOUR HOUSE

CREEPY FACEBOOK EVEN KNOWS WHEN YOU MENSTRUATE AND WANT TO GET PREGNANT

Things are strange at Facebook even after “[still a human](#)” [Mark Zuckerberg](#) https://youtu.be/EgI_KAkSyCw appeared in front of congress last spring to answer questions about data collecting and invasive actions.

Smartphone Apps Sending "Intensely Personal Information" To Facebook - Whether Or Not You Have An Account

Facebook has been collecting "intensely personal information" from millions of people - whether they have Facebook accounts or not, according to testing performed by the Wall Street Journal.

According to tests of more than 70 apps using software to monitor internet communications, the Journal found that "the apps often send the data without any prominent or specific disclosure," and that "Facebook software collects data from many apps even if no Facebook account is used to log in and if the end user isn't a Facebook member."

Eleven of the apps tested sent Facebook "potentially sensitive information about how users behaved or actual data they entered."

For example, Flo Health Inc.'s "Period & Ovulation Tracker" - which boasts 25 million active users, was sending Facebook information on when women were having their periods - or indicated their desire to get pregnant, according to the tests.

Other apps found sending Facebook information include; Instant Heart Rate: HR MOnitor, Realtor.com's app, "at least six of the top 15 health and fitness apps" and BetterMe: Weight Loss Workouts"

Apps often incorporate code known as software-development kits (SDKs) which allow developers to integrate various features or functions across platforms. One of these is Facebook's SDK - which allow apps to collect data for targeted advertising or to allow apps to better understand user behavior.

Facebook's SDK, which is contained in thousands of apps, includes an analytics service called "App Events" that allows developers to look at trends among their users. Apps can tell the SDK to record a set of standardized actions taken by users, such as when a user completes a purchase. App developers also can define "custom app events" for Facebook to capture—and that is how the sensitive information the Journal detected was sent.

Facebook says on its website it uses customer data from its SDK, combined with other data it collects, to personalize ads and content, as well as to "improve other experiences on Facebook, including News Feed and Search content ranking capabilities." -Wall Street Journal

Last year Facebook CEO Mark Zuckerberg claimed that the company would create a "Clear History" feature to allow users to analyze data which had been collected about them from various apps and websites - and then delete it from Facebook.

We're still waiting on that... ([READ MORE](#))
